### DETAILED ACTION

Claims 7,21,29,39,43,44,48 and 49 remain pending

#### *Response to Arguments*

The applicants arguments filed on June 23,2004 have been fully considered.

The amended claims remain rejected in view of the reference to Pollin (US Patent 5,727,249). See following rejection.

#### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pare, Jr et al (US Patent 6,230,148) in view of Pollin (US Patent 5,727,249).

As per claim 6,

Pare Jr. et al. ('148) discloses a method for using one or more computers to electronically clear and cash a check submitted to an on-line merchant from an on-line consumer by electronic means comprising the steps of:

accepting an input of check information submitted by consumer;(Figure 7)

verifying the accuracy of the check information;(column 8, lines 41-46)

debiting the consumers checking account from which the check was drawn in an amount indicated in the check information;(column 4, lines 57-59)

crediting the merchant's account in the amount indicated in the check information.(column 4, lines 59-61)

Pare Jr. et al. ('148) discloses does not specifically disclose comparing the routing number to a database to determine if the paper routing number provided by the consumer matches the electronic routing number needed to process the on-line transaction Pollin ('249)discloses comparing the routing number to a database to determine if the paper routing number provided by the consumer matches the electronic routing number needed to process the on-line transaction (Column 9, lines 37-59) It would be obvious to one having ordinary skill in the art of electronic banking at the time the invention was made to combine the Pare Jr. et al. ('148) method with the Pollin method in order to maximize the likelihood of funds recovery.
